Status LED's

Status LEDs, RGB 3-in-1, through-hole, clear dome

LED resistor calculations (matching mcd values)

RED – 20mA = 600 mcd → 1mA = 30mcd
– 300mcd = 10mA
– Vf=2V (typ), 3.3–2V = 1.3V/10mA = 130R → 120R

BLUE – 20mA = 300 mcd → 1mA = 15 mcd
– 300mcd = 20mA
– Vf=3V (typ), 3.3–3V = 0.3V/20mA = 15R → 22R

GREEN – 20mA = 1300 mcd → 1mA = 65 mcd
– 300mcd = 4.6mA
– Vf=3V (typ), 3.3–3V = 0.3V/4.6mA = 65R → 60R

Buzzer

To indicate device states, f = 4kHz
~10V from the boost converter also used for the buzzer

KiCad E.D.A. 9.0.7		Id: 5/6

Joystick

Wiper value

Pins 1&2, resistance goes down as wiper moved in that direction
E.g.: If joystick has pin 1 = 3v3 and pin 3 = GND, pin 2 voltage increases as josytick moved to pin 1, decreases as moved to pin 3
